Hello Brian,

I just wanted to touch base and see how the meeting with the contractor went and to obtain any updated information. We need to update your projected information with dates and numbers of samples as soon as possible.

Please either email or give me a call to discuss.

Thanks Brian – Can you say whether the first sampling event will occur the week of June 24th or July 1st. Please let me know as soon possible.

Please keep us updated on any changes both in the number of samples and the projected week(s) of sampling.

Have a great and safe weekend.

Myra

Myra

We will be meeting with the contactor on May 1 or 2 to discuss scheduling sampling. Due to resource constraints, I expect to have to do at least sampling events. The second sampling event may not occur this fiscal year and may include biological samples and not chemical specific samples. I am working with the risk assessor on determining that. The attaché spreadsheet has the numbers of samples that we are planning on taking the first sampling event. It is possible that the results of the first sample event will provide information we need to complete the RI. I have also broken out the sampling by field and QA samples. I will discuss with Walt the need for the number of QA samples currently scheduled.

Thanks

Hello Brian – Can you provide the weeks of sampling? I remember that you said the last week of June and maybe the first two weeks of July??

Also, please provide an update on the number of samples per matrix per analysis. In case the number has changed.

Your prompt response is appreciated.

Take care.

Myra

If I can do all the work in one mobilization, I think that we will start late June and go for around 3 weeks. That assumes the contractor can get all the access agreements required and line up the all of the equipment required and the Gulf does not through a storm at us.

Thanks

Hi Brian – thanks for the projection

What month do you think it will take place?

Thanks

Myra

I just realized that I was looking at the original and not revised Sampling Plan and that numbers for soil sampling are incorrect. I have attached a revised spreadsheet with the correct number of samples for soils.

Thanks
